Application of Groups to Word Problems
R. Sivaraman\textsuperscript{1} and Dr. Sonal Badri\textsuperscript{2}

Abstract

By Using Combinatorial Group Theory an area of Mathematics arising from Abstract Algebra, the so called Word Problems can be effectively understood. With the objective of finding applications of the elements of fundamental groups, an attempt has been made in this paper to discuss the word problem in the form of finding the generators in the English Alphabets. These ideas can be widely used in Cryptography, the science of secret codes.
