Abstract

India is essentially an agricultural country. About seventy percentages of the population lives in villages. Majority of the Indian rural workers are agriculture dependent, in which the share of agricultural labourers is quite high. Agricultural labourers contribute enormously to the rural economy and also to the national economy. The concept of job satisfaction is a comprehensive one covering attitudes of an employee towards various job factors. The paper studies the job satisfaction of registered agriculture women labourers in Tirunelveli District. For this purpose, primary data were collected by the researcher through interview schedule method. It is designed to study the determinants such as age, marital status, educational qualification, family size, monthly income, field employed, period of payment of wages, and years of experience in work. ‘one way ANOVA’ and independent sample ‘t’ test, have been used for finding out the job satisfaction of women labourers in agriculture fields.

Keywords: Job Satisfaction, Agriculture, Female Labour, Registered Agricultural laboureres.
