## 7.1.4

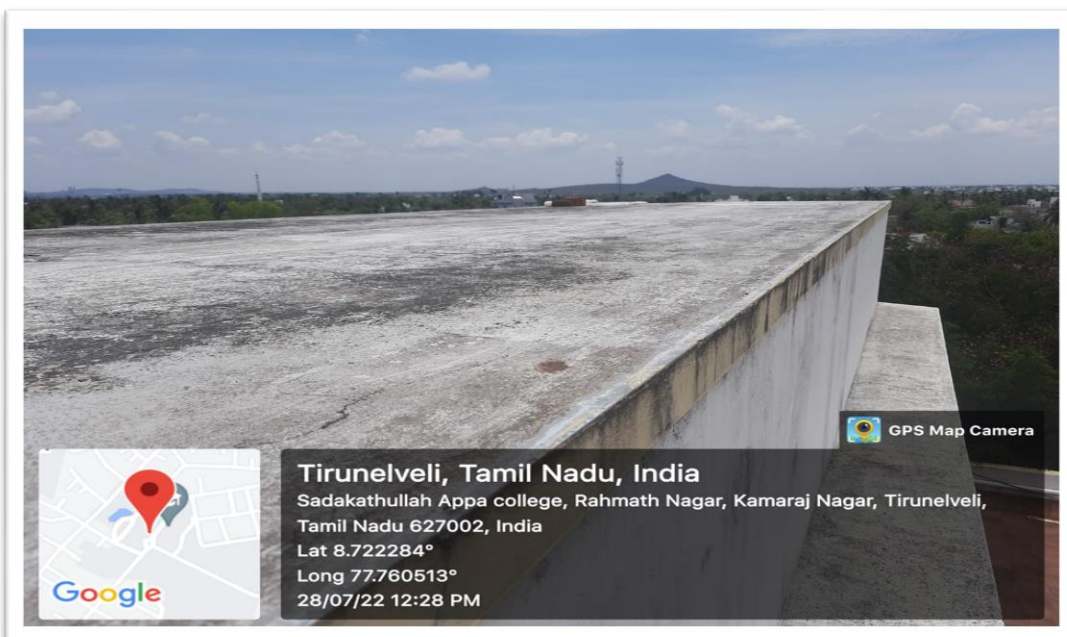

### Water conservation facilities available in the Institution

#### CONSTRUCTION OF TANKS AND BUNDS

There are four overhead tanks, one in the main block and the other three in the three hostels. There are also two freshwater ponds, serving as catchment areas, one between the Library and the Boys' Hostel and the other one, in front of the library, aiding in habitat restoration, serving as breeding grounds for local and migrating species, decorative components of landscape architecture, flood control basins and sources and sinks of greenhouse gases. Bunds slow down water sheet flow on the ground surface and encourage infiltration (groundwater recharge) and soil moisture.

## TANKS

## BUNDS
